

Step 1 Forking the repository

First go to the following repository on Github

https://github.com/bnajafi/BuildingSimulationProject_Polimi_TES

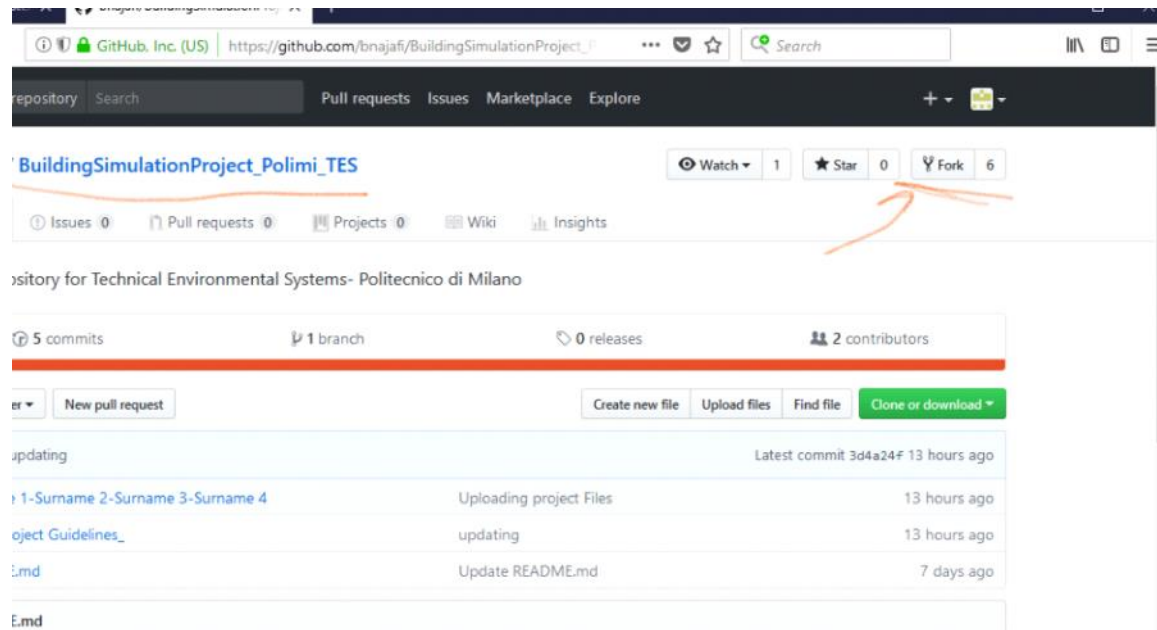

And fork it.

Then go to your profile --> repositories and find the repository with the same name,
(So address of the repository will be:

https://github.com/mrossi/BuildingSimulationProject_Polimi_TES

Where mrossi should be replaced with your username)

How to fork a repository:

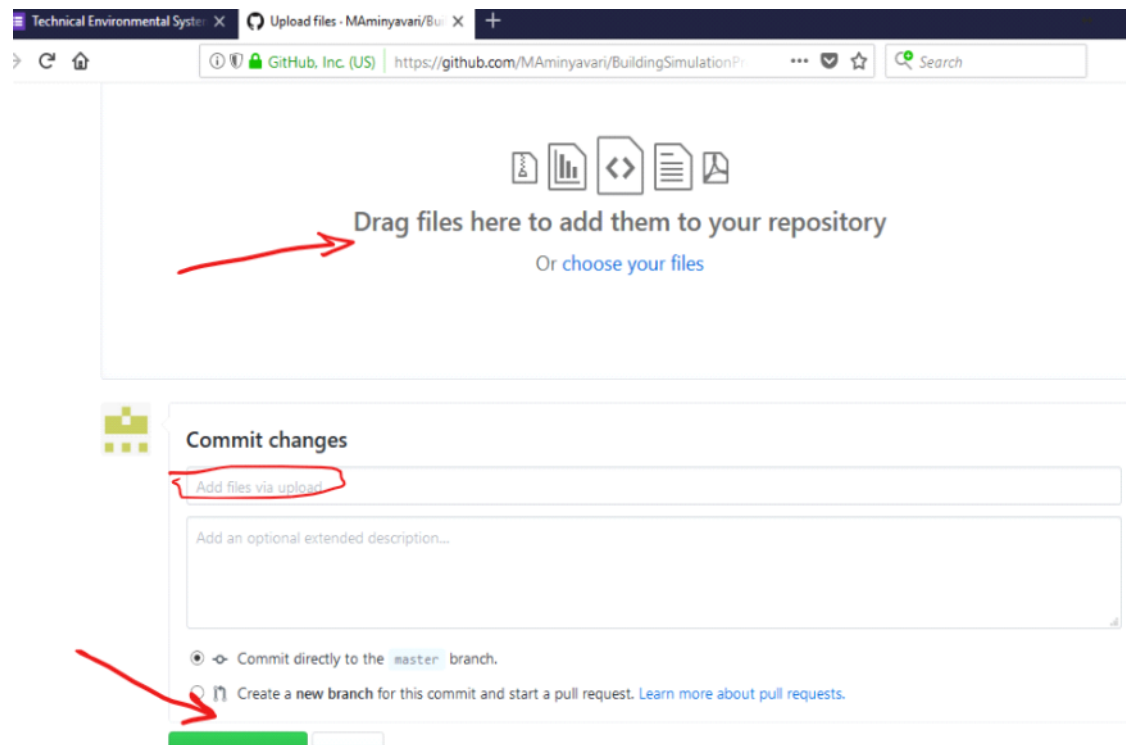

How to create the folder and commit it

On your computer create a new folder (called "surname 1-Surname 2-Surname 3-Surname 4" for example for a group it can be "Bianchi-Rossi-Smith-Verdi") in which you have included your final openStudio files and your report (a presentation which is converted into .pdf).

Then go to your fork of the repository (As was mentioned you can find it by going to your profile and then repositories). Then, drag and drop the folder and wait until the files are uploaded. Next, write the submission comment and "commit".

How to drag your folder and commit it :

Final step: Pull request

Now that you have your files added . Go to your fork (the repository that you see in your profile). Proceed to the second tab "pull request "
And click on new" pull request ". And then create a pull request.

How to make a new pull request:
