Step 1 Forking the repository

First go to the following Repo
https://github.com/bnajafi/BuildingSimulationProject_Polimi_TES
And fork the repo !

Then go to your profile , repositories and find the repository with the same name,
So address of the repository will be:
https://github.com/mrossi/BuildingSimulationProject_Polimi_TES
Where mrossi should be replaced with your username
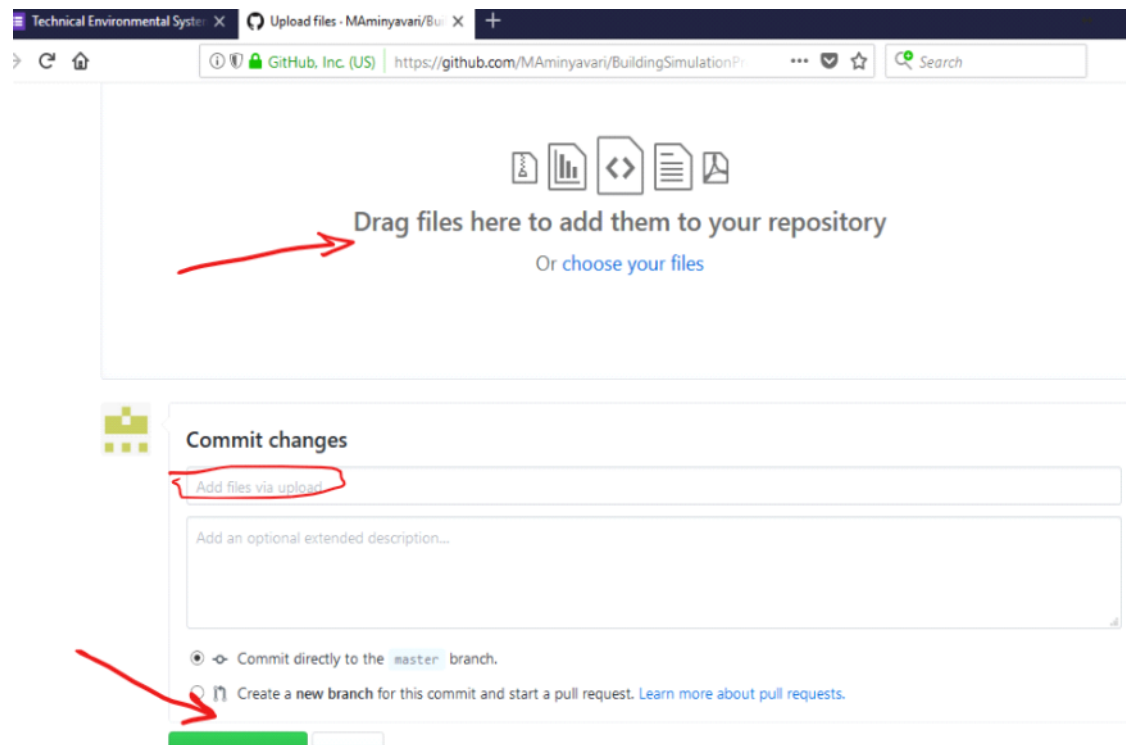

How to fork a repository:

How to create the folder and commit it

Create a folder (called "surname 1-Surname 2-Surname 3-Surname 4" for example for a group it can be "Bianchi-Rossi-Smith-Verdi") in which you have included <u>your final openStudio files and your report (a presentation which is converted into .pdf).</u>

Then go to your fork of the repository (As was mentioned your can find it by going to your profile and then repositories). Then, drag and drop the folder and Wait until the files are uploaded. Next, write the submission comment (for example "uploading project") and "commit ".

How to drag your folder and commit it :

Final step: Pull request

Now that you have your files added . Go to your fork (the repository that you see in your profile).
Proceed to the second tab "pull request "
And click on new" pull request ". And then create a pull request.

How to make a new pull request:
